

QUADCON ISS

Part Number:

BXQESTPOID0003 (Standard Tan)

BXQESGPOID0003 (Standard Green)

Quadcon Integrated Storage System is a unique and versatile mini-container originally developed for use by the United States Armed Forces. The unit is configured to enable four containers to be secured together, using the exclusive SeaLock connector. The resulting package has the same footprint as a standard 20' ISO intermodal container. Alternatively, two Quadcons may be connected together to create a 10' ISO container.

This four-into-one concept offers the advantages of a segregated loading pattern with the ease of handling of a standard 20' container. Intended for use as a transport/storage unit, the Quadcon's double-door access offers a wide range of options for on-site storage sheds, mobile lockers, capital equipment housings, etc. Custom interior configurations are available.

Quadcon's all-steel construction and unique versatility makes it an ideal new option for both commercial and military operations.

CMCI produces a broad range of American-made and integrated, intermodal equipment that is unrivaled in quality and performance. Strategically located in Charleston, South Carolina, CMCI can service your requirements by land, sea and air.
